

Maintenance sunscreens

Over the years, sunscreens have a lot to endure. Therefore, for an optimal lifetime of your sunscreen, proper maintenance is essential.

The sunscreens of COPACO are very easy to maintain. To clean your sunscreen, you only need a soft brush or soft sponge and clear water. A high-pressure washer is definitely not recommended because it can damage the PVC-coating of the fibreglass.

For cleaning, always keep the sunscreen flat. Dents and creases can damage the fibres of the fabric. After cleaning, the sunscreen can dry outdoors / in open air until the screen is completely dry.

For stubborn stains, you can use a soft soap dissolved in tepid water. In this case, it is recommended to rinse the sunscreen thoroughly before drying it outdoors / in open air.
